

Academic year 2018-19

Institutional Distinctiveness

The great challenge of the College Management to arrest the water flow during rainy season is sorted out to an extent by constructing seven Pits for harvesting rain water. The Rain water flow is channelized through pits from Economics block through the wicket gate behind the Heritage Block till the Computer Block.

The excess rain water leads to the drainage behind the computer block. The Pits are situated in the ascending order to enable the Rain Water Harvest. Pit Covers are installed to regularly monitor the water level and its usage.
